Professional Summary

Data-driven Information Technology graduate experienced in building Power BI dashboards, relational data models, and SQL-based reporting pipelines using SQL, PostgreSQL, DAX, and Python (Pandas, NumPy), with a strong foundation in data cleaning, data visualization, and stakeholder-ready business insights.

Education

M.H. Saboo Siddik College of Engineering, Mumbai

Aug 2022 – May 2026

Bachelor of Engineering in Information Technology | CGPA: 8.59 / 10

Secondary School Certificate (SSC), Maharashtra State Board

2020

Scored 88%

Technical Skills

- **Languages:** Python, Java, JavaScript, SQL
- **Data Analysis & Visualization:** Data Analysis, Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA), Statistical Analysis, KPI Tracking, Reporting, Pandas, NumPy
- **BI & Reporting Tools:** Power BI (Dashboards, DAX, Data Modeling, Power Query), Microsoft Excel (Pivot Tables, VLOOKUP, Formulas), Business Intelligence (BI), Dashboard Development
- **Databases:** SQL, MySQL, PostgreSQL, Database Management
- **Other:** Git, GitHub, Jupyter Notebook, VS Code, Problem Solving, Analytical Thinking

Technical Projects

Credit Card Portfolio Analysis — Power BI Dashboard

2026

Power BI, PostgreSQL, SQL, DAX, Power Query

- Built a 3-page Power BI report analyzing 10,000+ customer credit card records, covering transaction trends, customer segmentation, and credit risk.
- Designed a relational data model in PostgreSQL with customer and transaction tables linked via foreign keys, connected directly to Power BI.
- Built custom DAX measures for per-customer acquisition cost, delinquency rate, and utilization-based risk segmentation.
- Identified a mismatch between card-tier acquisition cost and revenue, and a counterintuitive relationship between credit utilization and delinquency rate.
- Simulated a real-world data refresh pipeline by appending new records in SQL and validating end-to-end updates in Power BI.

Diabetics Prediction System — ML-Based Web Application

2025

Python, Scikit-learn, Pandas, NumPy, Flask, SVM

- Collaborated with a 4-member team to build a Python-based web application predicting diabetes risk from user health parameters (Glucose, BMI, Blood Pressure, Insulin, Age) using the Pima Indians Diabetes dataset.
- Trained and evaluated a Support Vector Machine (SVM) classification model using Scikit-learn, with data preprocessing and analysis in Pandas and NumPy.
- Conducted a literature review comparing prior ML approaches (SVM, Random Forest, Decision Tree, ANN) to guide model selection and evaluation strategy.
- Contributed to building the Flask-based backend serving real-time predictions through a web interface.

TaxBae — AI-Powered Personal Finance & Tax Optimization Platform

2025 – 2026

React.js, Node.js, Express.js, MongoDB, JWT, Postman

- Collaborated with a 4-member team to build a full-stack platform (MERN stack) for expense tracking, tax calculation, and AI-based personalized financial insights.
- Built a tax calculation and optimization module with deduction-based suggestions, plus a real-time analytics dashboard visualizing income, expense, and spending trends.
- Implemented secure JWT-based authentication and RESTful APIs, tested using Postman.
- Conducted functional testing across normal, edge, and invalid-input scenarios to validate calculation accuracy and system stability.

Certifications & Recognition

AWS Academy Graduate – Machine Learning Foundations

AWS Academy Graduate – Cloud Foundations

AWS Skill Builder: Cloud Practitioner Essentials, Technical Essentials, Fundamentals of ML & AI (+ 9 additional courses in GenAI, Prompt Engineering & Responsible AI)

Tata GenAI Powered Data Analytics (Forage) | Data Visualisation: Empowering Business with Effective Insights (Forage)

Data Analytics Job Simulation – Deloitte (Forage) | Software Engineering Job Simulation (Forage)
